PROFESSIONAL SUMMARY

Analytics professional with 5+ years of experience turning subscriber and user behavioural data into commercial decisions. Track record of designing and running A/B experiments, building KPI frameworks, and communicating data stories to senior leadership at scale. Background spans consumer SaaS, media intelligence, and space-tech, combining rigorous statistical thinking with a sharp commercial instinct for what moves engagement and retention. Proficient in SQL, Python, and Power BI, with hands-on experience building large-scale ETL pipelines.

EXPERIENCE

Cision Inc | Business Analyst *London, UK | 2024 - Present*

- Designed and executed experimentation frameworks to evaluate product changes, measuring subscriber engagement lift and informing go/no-go decisions on feature rollouts across 3 core product lines.
- Built cohort and behavioural analyses across the full subscriber lifecycle, from acquisition and activation through retention and churn, surfacing insights that reduced churn by 11% and increased engagement by 19%.
- Defined and maintained KPI frameworks for 5 cross-functional product initiatives and created Power BI dashboards tracking plan performance and revenue health, used weekly by senior leadership.
- Developed SQL-based ETL pipelines to consolidate multi-source subscriber datasets, improving data accuracy by 32% and enabling reliable analytical reporting at scale.
- Leveraged Salesforce CRM data alongside product telemetry to build segmentation models, enabling targeted interventions and personalised subscriber value propositions, with full commercial team adoption of the resulting client health dashboard.

Frontier Space Technologies | Business Analyst *Birmingham, UK | 2023*

- Analysed engagement and behavioural patterns across user cohorts to identify performance trends and developed statistical models that improved targeting accuracy by 18%.
- Designed data-driven business cases and ROI analyses to support subscription pricing and retention strategy decisions, translating complex analysis into clear recommendations for senior stakeholders.
- Built structured datasets and analytical reporting frameworks enabling scalable subscriber performance tracking, and facilitated cross-functional workshops to align on metrics and definitions.

Brillio Pvt Ltd | Business Analyst *India | 2022*

- Standardised KPI definitions and data models for performance evaluation across multiple business units, improving reporting consistency and enabling meaningful plan-versus-plan comparisons.
- Translated business requirements into analytical solutions and ETL workflows, reducing decision cycle times and supporting revenue optimisation initiatives.

Infosys Ltd | Data Analyst *India | 2021 - 2022*

- Automated ETL pipelines using SQL and Python across large-scale datasets, cutting manual processing effort by 40% and enabling faster delivery of subscriber and performance insights.
- Delivered actionable insights from complex datasets, including trend identification, forecasting, and anomaly detection, and built dashboards enabling stakeholders to self-serve and monitor KPIs.

PROJECTS

Enterprise SaaS Pricing Transformation *PostgreSQL, Python (pandas), Power BI*

github.com/Lipsanayak414/pricing-transformation

- Modelled an insurance-software vendor's migration from perpetual licences to SaaS subscriptions using an analytical core built entirely from public company filings (Guidewire, Sapiens, Duck Creek), with all assumptions isolated in a benchmark-bounded scenario layer; tested three conversion-pricing paths (1.25x, 1.5x, and 2.0x of prior maintenance) across a 36-month sunset to maximise long-term ARR while containing the near-term revenue trough.
- Recommended the 1.5x path (\$365M Year-5 ARR, 7.7% trough) as the risk-adjusted base case and ran a price-resistance sensitivity that isolated the ~20% cumulative-churn threshold where the aggressive 2.0x scenario stops winning; packaged the result into a 10-slide CFO strategy deck and a Power BI dashboard.

UAT Test Case Generator CrewAI, FastAPI, n8n, Python, OpenAI

github.com/Lipsanayak414

- Engineered a multi-agent UAT test case generator using CrewAI and FastAPI: a sequential crew of three agents (Requirements Analyst, QA Specialist, BA Reviewer) parses requirements documents and produces structured test matrices with coverage summaries, integrated with n8n for end-to-end workflow automation.

Process Gap Analyser CrewAI, FastAPI, n8n, Python, OpenAI

github.com/Lipsanayak414

- Developed a 4-agent process gap analysis tool whose specialised agents (Process Mapper, Gap Analyst, Root Cause Analyst, Improvement Strategist) collaborate sequentially to produce structured gap reports with root cause analysis and prioritised recommendations, orchestrated via n8n.

EDUCATION

Cranfield University

MSc in Management | UK | 2022 - 2024

Veer Surendra Sai University of Technology (VSSUT)

BTech in Information Technology | India | 2015 - 2020

TECHNICAL SKILLS

Analytics: Product and subscriber analytics, cohort analysis, funnel optimisation, segmentation, churn and retention analysis, trend forecasting

Experimentation: A/B test design and analysis, experimentation frameworks, causal inference, statistical hypothesis testing

Data Science: Python (pandas, scikit-learn, statsmodels), SQL (CTEs, window functions, complex joins), data modelling

Dashboards: Power BI (DAX), KPI definition, performance reporting, data visualisation storytelling

Infrastructure: ETL and ELT pipelines, Databricks, data quality and governance, Salesforce CRM integration

AI Workflows: CrewAI multi-agent systems, FastAPI, n8n, OpenAI API

Collaboration: Cross-functional stakeholder management, Agile, Jira, Confluence, UAT, requirements elicitation

Certification: Lean Six Sigma Green Belt
